

## The ED Legsim

Hartford Walking Systems, Inc., proudly introduces the evolution of their familiar ED Walker. While functionally similar to The ED Walker, The ED Legsim offers amputees a structurally superior, highly adaptable unit. It is stronger and more easily adjusted, with accessories to meet the unique needs of amputees. Numerous seat styles are available, and multiple stabilizer systems assist those with balance problems.

The ED Legsim is designed to complement prosthesis use and can also serve as a substitute. It can be used any time users are without their prosthesis to avoid the need to hop or use a wheelchair or walker.

This enhanced product has evolved by working with prosthetists throughout the country as well as through HWS' commitment to help our wounded military heroes. Working with these brave soldiers at Walter Reed Army Medical Center brought to light many of the enhancements that are included in The ED Legsim.
